WRITING (30 scores)

Albert Einstein once said: "Imagination is more important than knowledge." It means that any piece of information or skill may appear to be useless if you don't know what to do with it. Knowledge is helpful when you know where and how to use it.

I absolutely agree with this opinion because ~~you~~ you can do almost everything if you have a good imagination. In any occasion, even if you don't know how it works, you can find another way to deal with it with the help of creativity. There're a lot of examples from our life which ~~can~~ prove this thought. ~~Prove that~~

Firstly, that's ~~what~~ exactly what engineering is. It's mostly based on imagination. Engineers try to create something that can make our life better and easier. And it's a very difficult work especially in the century of technology and information. That's the reason why it's important for them to have a good imagination and creativity.

Many other professions need them too. These are a designer, a photographer, an architect, a hairdresser and a lot more. As you can see, ~~all of the~~ people can't go without them in many aspects of our life.

In conclusion I would like to say that imagination is a base of any invention. It gives you a lot of great opportunities if you ~~can~~ know how to use them. That's why it's so important.
